Winch Manufacturers and Worldwide Superwinch Distributors

Manufacturers of the incredible G10 and G12 highly efficient electric winches

Global Suppliers of BRB Roo Bars & Replacement Bumper winch fitting kits

Distributors of Dyneema-Bowrope 12 strand synthetic fibre winch rope

Manufacturers of commercial Portable Petrol Twin Capstan Winches

Master Distributors of the complete range of Superwinch products

Manufacturers of the Goodwinch range of off-road equipment

Suppliers and Distributors of quality off-road accessories

Company Registration No. 4392946
VAT No. 540 4303 88

Welcome to Goodwinch

Enclosed for your interest is our latest set of information regarding our winches and Off-Road Equipment we supply.

Here at the Centre during the 20 years we have been operating we have welcomed over 10,000 clients from all around the world who have chosen from our range of tested and proven off-road recovery equipment or winch systems, or have joined us on one of our Off-Road Training Courses.

One of our primary strengths lies in the fact that the Centre was founded and is run by off-road enthusiasts. This enables us to provide advice and information based on first hand experience from specialists who are dedicated to remaining at the forefront of the driver training and off-road equipment market. This philosophy has been the cornerstone of our approach down the years and it is still a major factor that keeps us ahead of the field. Whether you rely on your vehicle for your living, or enjoy your vehicle for recreational off-road driving at weekends, we have the knowledge and experience to confidently advise you, and to help ensure you get the very best out of your vehicle.

Take our winch systems for example. Over the years we have continually refined our systems to the point where they enjoy International recognition as some of the very best systems available. The design, function and performance have been proved time and again in the widest possible range of environments and applications. Whether this is for severe competitive use in the sub-tropical rain forests of Rain Forest Challenge in Malaysia, or at work on a muddy building site in Macclesfield, when it comes to winch systems, you can rest assured that a system purchased and prepared at our Centre will provide many years of service. As Superwinch Master Distributors, we have the product range and resources to cover every requirement. The fact that names such as the X9 and the Husky have become legendary over the years is due to reliability and performance they have provided in the harshest environments. Along with our own Goodwinch G10 and G12 these excellent winches provide the backbone of our vehicle-mounted winch line-up.

We also now stock the Superwinch range of high speed 6,000 and 9,000 lbs planetary winches. The EP6 and EPi6 models feature a 3.6HP series wound motor, the EP9 and EPi9 a 4.6HP series wound motor and they are fitted with an external cone brake giving a 100% automatic load holding, which makes them ideal for lowering out applications. All models come complete with wire rope, roller fairleads, a 15ft durable and weather resistant remote handset (the norm is only 12ft) and heavy duty sealed solenoids (like Albrights), and you have a choice of the solenoids either above the motor (EP) or in a bridge above the drum (EPi). New to the range are the 'Big Brother' EPs, EP12 (12,000 lbs) and EP15 (15,000 lbs). The EP12s will no doubt quickly find their way onto Defenders and we now have special fitting kits for these and the EP15s are being fitted to Vehicle Recovery Trucks.

Our equipment range starts with the basics. Items such as high quality tow ropes and hand winches are just some of the more essential items that should be carried on all vehicles that venture off-road. Don't forget that it may not be just you that needs a tow! Our heavy duty tow ropes start at just £19.00 +VAT, and that price includes a free shackle!

If you are planning an expedition we can advise on the range of equipment needed for the nature of the terrain you will be travelling across. We regularly provide equipment 'kits' tailored to the specific requirements of vehicles and terrain. As an example, these could comprise of items such as tow ropes, Kinetic Energy Recovery Ropes, tree strops, 'T-Stake' ground anchors, 'Waffles' sand and bridging ladders, and a Brano/GP hand winch or portable electric winch system. We also have the hugely successful **Dyneema-Bowrope** 12 strand synthetic fibre winch rope. We have supplied over 40km in the last 24 months! See the enclosed leaflet for more details

Our vehicle mounted winch systems are comprehensive systems complete with a dedicated BRB replacement winch bumper or fitting kit for your specific vehicle. We differ from many winch suppliers in that all our systems are individually built before being bench tested prior to careful packing and subsequent despatch. The reputation our Centre has come to enjoy has been earned over the years for consistently supplying reliable and dependable systems. As we despatch our systems all over the world we can't afford to encounter problems, and we need to be confident that once the system reaches its far flung destination it is in perfect condition and ready for action.

We also now have a new range of Towball Mounted portable winch systems, utilising a unique component that converts the sphere of the tow ball to a shape that locks into a specially made hollow enclosure. Winch options available are 1,000 to 9,000lb. Their uses must be endless! And there's loads of other items you can hang on a tow ball too—bike racks, vice mounts

Incidentally, BRB stands for British Roo Bars. These are high quality British built replacement Bumpers and Roo Bars that have been designed to incorporate the range of winches we supply. The designs have been formulated to blend in successfully with the various vehicles they can be fitted to. In addition to the winch mounting function, they also incorporate two jacking and two strong recovery points, and the whole unit is powder-coated.

As you will see from the accompanying specifications a Goodwinch system has some pretty impressive features not found in others.

Maximum pulling power per £.

We currently offer eight models of vehicle mounted winch systems starting with the popular Superwinch 'Standard X9' which can be purchased as a commissioned special price of just **£575** plus VAT including Roller Fairleads, Wire Rope and a specially made Vehicle Wiring Kit. Alternatively, we offer a similar deal on our Goodwinch 'X9 Plus' at **£675** plus VAT, or for commercial applications the Superwinch 'Husky' is only **£789** plus VAT. These are normally supplied as fully commissioned, wired up ready for use, bench run and tested by our workshops, and issued with a Certificate

The fourth system is our increasingly popular Goodwinch 'X9 Special Edition' 9,500 lbs winch to celebrate our 18 years service to the off-road world. These high specification winches are built specially for you. They come fully commissioned, wired up and ready for use, with Roller Fairleads, Wire Rope and a Vehicle Wiring Kit and Cut Out Switch at **£799** plus VAT.

Goodwinch G10, Ultimate in winch design and performance.

If you are looking for the best in electric winches for your off-road vehicle, then you need look no further than our G10. The G10 was conceived out of a need for a powerful and reliable easy to maintain winch which was capable of handling extreme winching situations in the most arduous Competition or commercial environments.

The main features of the G10 are :-

**High quality Albright Protected Solenoids
Bowmotor with Heatsink
CNC Machined Drum Supports
Fully lubricated Gearbox**

**'V' ring and 'O' ring seals to keep water and dust out
Roller bearings for the winch drum, for efficiency
10mm x 31m Wire Rope with Safety Hook
Maintainable with only a grease gun**

The G10 has established itself as the benchmark against which all other electric winches are judged. The original design brief dictated that the G10 must combine power, speed, easy maintenance and durability as the main attributes. During development we soon realised that we had a success on our hands, but even we have been pleasantly surprised at the extent to which the G10 has become so popular so quickly. The key to the efficiency of the G10 lies in the revolutionary use of huge roller drum bearings. The resultant reduction in friction not only increases the speed of the winch but also significantly reduces the current load required to drive it, especially under load, and this in turn reduces the amount of heat generated by the motor. The ability to be able to thoroughly grease the gearbox also plays a large part in reliability and longevity. These are major considerations, particularly for regular winch users and commercial or fleet applications, where downtime is extremely costly.

Studying the accompanying detailed specifications will reveal that the G10 is the only serious choice for those requiring a state-of-the-art electric winch. We have been particularly pleased to have supplied G10's for many of the Anniversary, Limited and Special Edition Defenders.

Goodwinch G12 with even more features.

Never one to sit back and rest on my laurels, I enjoy looking, thinking and designing winches for the future. I call this 'Winching Through Technology'. Of course the G10 is a brilliant winch. I've listened to off-roaders around the World and have asked them, that if money was no object 'how could we make our G10 even better?'

Well, we have exceeded even our own expectations by designing and engineering our Goodwinch G12:

**Also with a Bowmotor and Heatsink
Larger drum flange diameter
Twin 'V' ring seals for submersion antics
Heavy duty aluminium gearbox casing**

**Choice of motor speeds
Strengthened driveshaft
Greater waterproofing qualities
Now six grease nipples**

Our Goodwinch G12 is a truly magnificent winch. If you want the best, have one of these.

Full details of all our winches and other products can be found in the accompanying literature and we look forward to being of assistance by advising or receiving your valued order, either by phone, fax, or e-mail. There is also much more information, like the **Learn with David** articles, which can be viewed on our website www.goodwinch.com

We look forward to hearing from you soon.

Yours sincerely

David Bowyer
